Application of Drinking Rice Straw Making Machine

Drink straw making machine is composed of extruder and die, Vacuum calibration and cooling unit, haul-off and rotary cutter or coiler, all the machines controls base with the control elements ergonomically adapted to permit easy operation.

Drink straw making machine

It is composed of extruder and die, Vacuum calibration and cooling unit, haul-off and rotary cutter or coiler, all the machines controls base with the control elements ergonomically adapted to permit easy operation. The machine is suitable for extruding straws, refill tubes and most small diameter tubing and a wide range of industrial applications.

Characteristics:

1.Wide application: drinking straws making, lollipop stick, cotton stick, medical tube, all kinds of toys tube, etc.

2.Easy to operate. One operator is enough to run the whole line

3.Cut form: Diversified cut-end: 90° /90° , 90° /45° , 90° /60° , 45° /45° , 60° /60°

4.With stable output and wide range of color options.
