

How to Fully Automatic Kurkure Making Machine?

[kurkure making machine](#) is a special extruded snack with extreme crispy taste.

The main raw material is corn grits which is mixed with water evenly by the flour mixer, squeezed and twisted by the extruder to form the irregular curls shape, and then cut into different length, After drying or frying, the product is then tumbled with the desired flavor components, other flavor and format variations such as Cheetos Puffs, Cheetos Paws, Cheetos Twists, Cheetos Balls, and Cheetos Whirls are all finished with a drying stage in large ovens.

Flow chart:Mixing system---Extrusion system---- -Frying system----Flavoring system---Packing system
