

300kg/h Commercial Chrysanthemum Microwave Drying Machine For Sale In Bangladesh

I inquired about Jamir's factory size in Bangladesh. According to his factory size and the amount of chrysanthemum planted, we recommend him to start with 300Kg/h first, and then expand the production after he is familiar with the process.

In June 2021, this Bangladeshi client added my WhatsApp through a friend referral, his name is Jamir. His friend Lorenzo bought a set of Tenebrio molitor drying equipment in our company two years ago, and the drying effect and sales are very good. So Lorenzo recommended our company to Jamir. Jamir is a former engineer in Bangladesh, and he grows chrysanthemum with his family after retirement in Bangladesh. This year, he plans to use microwave equipment to dry chrysanthemum.

I inquired about Jamir's factory size in Bangladesh. According to his factory size and the amount of chrysanthemum planted, we recommend him to start with 300Kg/h first, and then expand the production after he is familiar with the process.

300kg/h Commercial Chrysanthemum Microwave Drying

Machine layout

Jamir has no experience with microwave equipment before, and we have made some answers based on his questions.

1. Q:What are the advantages of chrysanthemum dried in a chrysanthemum dryer over naturally dried chrysanthemums?

A?

Naturally Dried Chrysanthemum VS 300kg/h Commercial Chrysanthemum Flower Micro

Naturally Dried Chrysanthemums	300kg/h Commercial Chrysa Drying Mac
<p>Natural drying and natural drying in the shade can save costs, but if it encounters rainy weather, chrysanthemums are prone to mold, the efficiency and yield are low, and the shelf life is relatively short. Generally, it may grow bugs in 2 to 3 months, the reason is that some of the surface eggs are not killed before drying. Therefore, the natural drying method is not suitable for commercial production of chrysanthemums dried flowers.</p>	<p>Using chrysanthemums dryer t can well protect the active chrysanthemums, and the petal whole dried chrysanthemums and good appearance. It is producing high-grade dried ch with chrysanthemums dryer production of dried chrysanth ones are hot air drying, low ene and hygien</p>

2.Q?What is dry chrysanthemums technology?

A?300kg/h commercial chrysanthemums microwave drying machine can dry all kinds of flowers, which has a single microwave drying equipment, combined hot air + tunnel microwave drying equipment, lightwave + microwave traditional tunnel drying equipment, etc. Oil heating tunnel drying equipment covers an area of small, sustainable production speed high yield.

300kg/h Commercial chrysanthemums microwave drying machine units all use a PLC control interface with a display mounted near the control panel for easy viewing of the interior. Commercial chrysanthemums microwave drying machine are a new type of drying method. When drying, the microwave energy is converted into heat by direct action on the molecules of the medium.
