

# How is Biodegradable Drinking Straws Maker?

Degradable straw is a new type of non-polluting, degradable routine within 60 days. To satisfy the needs of market clients, our business has actually created a brand-new kind of Pasta Alcohol consumption [Straws Extruder](#). The primary resources are corn starch, rice flour, flour as well as other grain flour. The items produced are all eco-friendly, non-polluting, and edible.

The main extruder adopts regularity rate-controlling with high automation. The screws are made of stainless steel as well as unique craft, which has the advantage of resilient usage, high pressure, as well as longer life. The required lubrication system, which can ensure the device's transmission life longer. It has the most extensive series of applications and can generate various products with various tools and even versions.
