With high-quality machinery and equipment, perfect technical services, and a good after-sales team and reputation, we have won the trust and support of customers at home and abroad.

1. Introduction of kurkure production line:

Kurkure is a special squeezed snack that is very crunchy in your mouth. The corn grits are mixed with a certain proportion of water and then enter the rotary head extruder. Under the squeezing and kneading action of the two turntables of the food extruder, the corn grits form irregular twisted shapes, and then the cutting knife cuts them into the required length of the product. Kurkure can be seasoned after being fried, or baked and seasoned. It is popular with consumers for its deliciousness.

2. Equipment configuration

Fried type:

?Powder mixer??Screw conveyor??Rotary head extruder??Elevator??Separation cylinder??Vibrating feeder??Continuous fryer??Vibration deoiler??Seasoning line

Baking type:

?Powder mixer??Screw conveyor??Rotary head extruder??Elevator??Oven??Seasoning line

3. The product showcase
