

What is Steamed Bread Drying Machine?

Steamed Bread Drying Machine CD system [Hot Air Circulation Drying Oven](#) has reached the advanced level at home and abroad by a lot of upgrading, adopt the axial flow fan, with automatic constant temperature control system. Its thermal efficiency is more than 95%, adopts convective heat transfer method to heating the air by few type heating methods.

Product features:

- 1.The water content rate of the discharged sludge can be less than 10%. And the maximum sludge volume reduction can be more than 85%.
- 2.High thermal efficiency. Less than 1 ton steam consumption for 1 ton wet sludge.
- 3.It occupies a small area. Equipment for treating capacity of 100ton/day wet sludge occupies less than 500m².
- 4.Drying under low temperture make sure the small volatile quantity of organics.
- 5.Thorough and mature tail gas treatment technology. 6.Standardized design and easy to install in site. Made of stainless steel ensures the service life more than 15 years.
