What is Steamed Bread Drying Machine?

Steamed Bread Drying Machine CD system <u>Hot Air Circulation Drying Oven</u> has reached the advanced level at home and abroad by a lot of upgrading, adopt the axial flow fan, with automatic constant temperature control system. Its thermal efficiency is more than 95%, adopts convective heat transfer method to heating the air by few type heating methods.

Product features:

1. The water content rate of the discharged sludge can be less than 10%. And the maximum sludge volume reduction can be more than 85%.

2. High thermal efficiency. Less than 1 ton steam consumption for 1 ton wet sludge.

3.It occupies a small area. Equipment for treating capacity of 100ton/day wet sludge occupies less than 500m2.

4. Drying under low temperture make sure the small volatile quantity of organics.

5. Thorough and mature tail gas treatment technology. 6. Standardized design and easy to install in site. Made of stainless steel ensures the service life more than 15 years.
