

What are the advantages of Corn Starch Straw Making Machine?

The wheat straw [corn starch pellet making machine](#) make pellets through extrusion by roller and die, die fixed, roller rotating, this efficient centrifugal type pellet machine, unique vertical ring die, with high pressure for hard wood sawdust, rice husk, bamboo, tree barks, straw, paper with low adhesion. Some materials will be sawdust, branch, cotton stalk, cotton seed hull, weeds, stalk and all kinds of crop straw, home waste etc.

Wheat straw corn starch pellet making machine with double layer dies, up and down dual-use, reduce the cost, high capacity and energy saving. It is our patent product in China, and no any other supplier produce this type pellet machine in the world present.

The wheat straw corn starch pellet making machine heart parts die and roller are made of high alloy steel wear resistant material according to different material, have longer life. The wheat straw corn starch pellet making machine make 4-12mm diameter of 1-1.5 high density pellets, it make biomass fuel pellets, feed pellets and organic fertilizer pellets.
